

HARIHARAN D

Bangalore, India | +91 9080940328 | imdhariharan@gmail.com

SUMMARY

Software Developer with 2+ years of experience designing, developing, deploying, and maintaining scalable backend and full-stack applications following software engineering best practices. Skilled in troubleshooting production issues, performing root cause analysis, and implementing preventive fixes to improve system reliability. Experienced in Agile software development, including sprint planning, daily stand-ups, retrospectives, and sprint reviews, with a strong track record of collaborating across product, design, QA, and engineering teams to deliver high-quality solutions on time. Proficient in Node.js, JavaScript, Python automation, REST API development, and database optimization, with hands-on experience maintaining technical documentation and system artifacts.

TECHNICAL SKILLS

Languages: JavaScript, Python, SQL, Java

Backend Frameworks: Node.js, Express.js, FastAPI, Django (Fundamentals), REST API Development

Frontend Technologies: React.js, Angular, HTML5, CSS3, JavaScript (ES6+)

Databases: PostgreSQL, MySQL, MongoDB, Supabase (PostgreSQL)

Cloud Platforms: Microsoft Azure

Developer Tools: VS Code, Postman, pgAdmin, DBeaver, XAMPP, Git

Methodologies & Best Practices: Agile Development, Sprint Planning, Daily Stand-ups, Retrospectives, Sprint Reviews, Root Cause Analysis, Troubleshooting & Debugging, Technical Documentation, Cross-Functional Collaboration, API-First Design, Query Optimization

PROFESSIONAL EXPERIENCE

Software Developer | Celton Semiconductors Pvt. Ltd Aug 2024 – Present

- Designed, developed, and deployed scalable full-stack business applications by migrating internal AppSheet solutions into modern web applications using Node.js, React.js, Angular, and PostgreSQL, in line with software engineering best practices.
- Designed and integrated backend REST APIs to support real-time data processing and workflow automation, ensuring seamless communication between frontend and backend systems and improving overall system scalability.
- Troubleshoot application issues and performed root cause analysis on backend services, implementing fixes and preventive actions that improved system stability and reduced recurring defects.
- Actively participated in Agile ceremonies, including sprint planning, daily stand-ups, retrospectives, and sprint reviews, to align development priorities and support consistent, on-time delivery.
- Collaborated closely with product, design, QA, and engineering teams to gather requirements, design solutions, troubleshoot issues, and deliver applications aligned with business objectives.
- Built and enhanced learner lifecycle management solutions, including automated notifications, reminders, and communication workflows, through backend automation techniques.
- Implemented database operations and query optimization using PostgreSQL and MySQL, improving application performance, data reliability, and maintainability.
- Maintained clear technical documentation and system artifacts, including API specifications and workflow notes, to support team collaboration, onboarding, and long-term maintainability.
- Utilized Git-based version control and structured debugging practices to uphold code quality and support continuous application enhancements.

KEY PROJECTS

Full-Stack E-Commerce Platform

Node.js, React.js, PostgreSQL, REST APIs, JWT Authentication

- Designed and developed a scalable full-stack e-commerce platform following modular, API-first architecture and engineering best practices.
- Implemented secure user authentication and authorization using JWT-based authentication and session management workflows.
- Built REST APIs for product and order management, integrating backend services with PostgreSQL for reliable data handling.
- Troubleshoot and resolved application performance issues by optimizing database queries and API request handling, improving overall responsiveness.

Sustainable Crop Recommendation System

Python, Machine Learning, SQL, Data Processing

- Developed a machine learning-based crop recommendation system using Python, applying structured data processing workflows to generate reliable recommendations.
- Improved prediction accuracy and system reliability through feature engineering, data preprocessing, troubleshooting, and model optimization techniques.
- Built reusable, modular Python components and database-driven recommendation logic to support scalable backend processing.
- Integrated recommendation outputs into a structured application workflow, improving usability and reliability for end users.

EDUCATION

B.E – Computer Science and Engineering, Anna University

2020 – 2024

CGPA: 8.4

HSC – St. Joseph's Mat. Hr. Sec. School

Percentage: 74.1%

SSLC – St. Joseph's Mat. Hr. Sec. School

Percentage: 86.4%

CERTIFICATIONS

- Java Programming – CodeChef (2023)
- Introduction to Cybersecurity – Cisco (2023)
- Cloud Fundamentals – IBM & TNSDC (2022)
- Fundamentals of Data Science – G Learn (2023)
- Python Programming – Retech Solution (2023)
